Professional Summary

Software Engineering student at Universiti Teknologi Malaysia (CGPA: 3.74/4.00) with six months of DevOps internship experience at PETRONAS Digital. Built Azure DevOps CI/CD pipelines and reusable Terraform, Linux, Bash, and Docker environments for private-network workloads, plus automated API validation and structured logging for .NET services. Hands-on with Kubernetes, Helm, Argo CD, GitHub Actions, and AWS EC2 instance deployment. Seeking graduate Cloud Operations, DevOps, or Platform Engineer roles in Malaysia; available full-time after graduation.

Professional Experience

Software Engineering Intern, DevOps Engineering Sep. 2025 – Mar. 2026
PETRONAS Digital *Kuala Lumpur, Malaysia*

- Built Azure DevOps YAML CI/CD pipelines to export, transform, validate, and deploy Hasura GraphQL metadata across development and production, reducing manual deployment steps and configuration drift.
- Automated Linux VM and self-hosted agent environments in restricted private networks using reusable Terraform, Bash, Docker, and Azure DevOps configuration.
- Created a reusable Groovy/Spock regression framework for dev-versus-prod JSON normalization, schema validation, filtering, and endpoint verification across microservices; integrated execution into CI pipelines.
- Implemented Redis/HybridCache resilience and Serilog structured logging to console, file, Azure Blob Storage, and SQL sinks, with fallback handling for external-service failures.

Selected Cloud and DevOps Projects

StyleSense – AI-Powered Microservices Platform Jan. 2025 – May 2026
Independent Project *DigitalOcean*

- Architected and deployed a 9-service event-driven platform across 14 Docker containers using Node.js, TypeScript, FastAPI, PostgreSQL, RabbitMQ, Redis, and GitHub Actions.
- Built multi-repository CI/CD pipelines across 9 repositories with service-triggered orchestration, automated image builds, and cross-service deployment workflows.

AWS EC2 Deployment Independent Project
Cloud Operations *AWS*

- Provisioned an AWS EC2 instance and deployed a Dockerized application, configuring the Linux runtime, application environment, and deployment verification.
- Used AWS CloudWatch for operational visibility and validated service health through application logs and health checks.

Kubernetes and GitOps Platform Migration – StyleSense Aug. 2026 – Present
Independent Project *k3d / k3s*

- Migrating the 9-service Docker Compose platform to Kubernetes, authoring reusable Helm charts and standardizing service configuration across environments.
- Implementing Argo CD GitOps delivery, environment-based Helm values, and Sealed Secrets for a planned k3s VPS deployment.

Technical Skills

Cloud: Microsoft Azure (VMs, Blob Storage, Container Registry, Azure DevOps); AWS EC2, CloudWatch
DevOps and IaC: Terraform, GitHub Actions, Azure DevOps YAML, Docker, Kubernetes, Helm, Argo CD, GitOps, CI/CD, Linux, Bash, Git
Programming and Backend: Python, C#, .NET, Node.js, TypeScript, SQL, FastAPI, REST APIs, PostgreSQL, Redis
Networking and Operations: TCP/IP, DNS, TLS/SSL, containers, secrets management, structured logging, health checks, automated testing
Additional: RabbitMQ, Apache Kafka, Groovy/Spock, Jest, React, Angular

Education

Universiti Teknologi Malaysia (UTM) Expected Oct. 2026
Bachelor of Computer Science (Software Engineering) | CGPA: 3.74/4.00 | Dean's List High Honors
